

\$ Findings, severity, and what is accepted

Security Review

Sam Whitfield

Security Engineering • September 2, 2026

\$ Findings

HIGH one line each, with the concrete failure

MEDIUM what an attacker gets, not what is theoretically possible

LOW kept, because a report of only high findings hides the pattern

\$ The one that matters

1 high

with a working proof, which is the only category that gets a date on this slide. Everything else is scheduled, not promised.

Accepted risk

\$ What we are choosing to live with

ACCEPTED the finding, in one line

WHY the cost of fixing against the exposure

REVIEW a date when this decision is looked at again

\$ What changed since last review

closed what was fixed

open what carried over, with a reason

new what appeared, and from which change

Open questions

\$ What is still unknown

OPEN the thing nobody has measured yet

OPEN the assumption this plan rests on

NEXT who finds out, and by when

\$ Appendix

Graphs, raw output and the commands to reproduce any of it. Kept after the close so the talk stays short and the evidence stays available.
